

Number of Team members: 2

Names: CJ Syki, Ahmed Salem

Name of team member who uploaded the zip to NYU Classes: CJ Syki

Hash of zip file:

=====

First Extra Feature (for teams of 2 or 3 people)

- Liking a photo

Very Brief summary:

- Users can choose to like/unlike a photo they can view in the Images page

1. The name of the team member who is primarily in charge of implementing this feature

Ahmed

2. The queries (and any other SQL statements) used in your implementation of the feature

```
# if user clicked unlike, remove from liked table.
if option == "unlike":
    query = "DELETE FROM Liked WHERE likerUsername = %s AND\
            photoID = %s"
    runQuery( query, None, ( username, photoID ) )
# if user clicked like, add to like table
elif option == "like":
    query = "INSERT INTO Liked VALUES( %s, %s, %s )"
    runQuery( query, None, ( username, photoID, \
        time.strftime('%Y-%m-%d %H:%M:%S') ) )
```

3. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

Under the images function, starting at **line 198**. It basically checks which link the user clicked. If the user pressed unlike, we want to remove their like from the Liked table (given their username and photoID); otherwise, if the user did like the photo, we insert their Like into the Like table (timestamp is not necessary).

The most important thing is that we **show the opposite link of whether the user liked the photo or not**. That is, if the user did like the photo, **we show the “Unlike” option**, and vice versa. That way, the user won’t accidentally press “Like” twice. (see photos below)

4. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that’s in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. **[Include on next pages or at the end]**
5. For features other than those I suggested (7 -- 11), also include:
 - i. What the feature is (in the style of the 6 requirements above)

ii. A sentence or two on why this is a good feature to add to Finstagram

iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)

Before liking the photo (photoID = 29, current user = cjsyki)

Second Extra Feature (for teams of 2 or 3 people)

- Unfollowing someone

Very Brief summary:

- On the Follows page, users (if following someone) can choose to unfollow them.

6. The name of the team member who is primarily in charge of implementing this feature

Ahmed

7. The queries (and any other SQL statements) used in your implementation of the feature

```
# if user unfollows someone, delete from follows
if option == "unfollow":
    query = "DELETE FROM Follow\
            WHERE followerUsername = %s AND followeeUsername =
%s"
    runQuery( query, None, ( currentUsername, followUsername ) )
```

8. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

Under the follow() function, starting at **line 568**. When the user chooses to unfollow someone, their corresponding row (follower = current user, followee = person current user followed) will be removed. By doing this and instead not setting acceptFollow = 0, we ensure that the user did unfollow, and not that the user did not accept a follow.

9. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that's in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. [Include on next pages or at the end]

10. For features other than those I suggested (7 -- 11), also include:

- i. What the feature is (in the style of the 6 requirements above)

- ii. A sentence or two on why this is a good feature to add to Finstagram

- iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)

Before unfollowing (follower = cjsyki, followee = sac784)

Third Extra Feature (for teams of 2 or 3 people)

- Commenting on photos

Very Brief summary:

- Users can choose to add comments to visible photos

11. The name of the team member who is primarily in charge of implementing this feature

CJ

12. The queries (and any other SQL statements) used in your implementation of the feature

```
# grab current user, comment, and photoID
username = session[ "username" ]
comment = request.form[ "comment" ]
photoID = request.args.get( "photoID" )

# if user wrote no comment, return an error
if len( comment ) == 0:
    return redirect( url_for( "images", error = "you must
enter a comment" ) )

# add comment to the comments table
query = "INSERT INTO Comment VALUES( %s, %s, %s, %s )"
runQuery( query, None, ( username, photoID, comment, \
    time.strftime('%Y-%m-%d %H:%M:%S') ) )
```

13. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

Under the addComment() function starting on **line 724**. We grabbed the comment the user wrote (and their username and corresponding photoID) and inserted it into the Comment table (along with timestamp). We included the timestamp because we want to sort by timestamp (that way, oldest comments appear at the top)

14. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that's in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. [Include on next pages or at the end]

15. For features other than those I suggested (7 -- 11), also include:

- i. What the feature is (in the style of the 6 requirements above)

- ii. A sentence or two on why this is a good feature to add to Finstagram

- iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)

Before adding a comment (photoID = 28, current user = sac784)

Fourth Extra Feature (for teams of 2 or 3 people)

- Deleting a photo

Very Brief summary:

- Users can delete photos they own

16. The name of the team member who is primarily in charge of implementing this feature

CJ

17. The queries (and any other SQL statements) used in your implementation of the feature

```
# if user clicked delete photo, delete the photo (w photoID)
# from photo, tag, liked, caption table
elif option == "delete":
    query = "DELETE FROM Photo WHERE photoID = %s"
    runQuery( query, None, photoID )
    query = "DELETE FROM Share WHERE photoID = %s"
    runQuery( query, None, photoID )
    query = "DELETE FROM Liked WHERE photoID = %s"
    runQuery( query, None, photoID )
    query = "DELETE FROM Tag WHERE photoID = %s"
    runQuery( query, None, photoID )
    query = "DELETE FROM Comment WHERE photoID = %s"
    runQuery( query, None, photoID )
```

18. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

Under the `images()` function starting on **line 208**. The option to delete a photo will only appear if the current user is the owner of the photo. When the user clicks it, not only will it be removed from the Photo table, but all corresponding entries in Share, Liked, Tag, and Comment tables will be deleted.

19. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that's in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. [Include on next pages or at the end]

20. For features other than those I suggested (7 -- 11), also include:

- What the feature is (in the style of the 6 requirements above)
- The feature is the ability to delete a photo. The option to delete a photo will only appear to the photo owners.
- A sentence or two on why this is a good feature to add to Finstagram

- This is a good feature because in Instagram, you are given the option to delete photos. If the photo owner made a mistake as well (shared to wrong people, uploaded wrong photo, mistyped caption, etc.), the owner can choose to delete and try again.
- iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)
- No additional changes were made to the schema. We just need to delete rows in several tables.

Before deleting the photo (current user = sac784, photoID = 30)

Fifth Extra Feature (for teams of 3 people)

Very Brief summary:

21. The name of the team member who is primarily in charge of implementing this feature

22. The queries (and any other SQL statements) used in your implementation of the feature

23. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

24. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that's in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. [Include on next pages or at the end]

25. For features other than those I suggested (7 -- 11), also include:

i. What the feature is (in the style of the 6 requirements above)

ii. A sentence or two on why this is a good feature to add to Finstagram

iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)

Sixth Extra Feature (for teams of 3 people)

Very Brief summary:

26. The name of the team member who is primarily in charge of implementing this feature

27. The queries (and any other SQL statements) used in your implementation of the feature

28. A clear indication of where to find the application source code for the feature. Include plenty of comments and/or a few sentences explaining the code.

29. One or more screenshots demonstrating the feature, showing how it appears in the browser; Also show the relevant data that's in the database when you execute this demonstration (before and after if the feature changes the data), either as screenshots or as text. [Include on next pages or at the end]

30. For features other than those I suggested (7 -- 11), also include:

i. What the feature is (in the style of the 6 requirements above)

ii. A sentence or two on why this is a good feature to add to Finstagram

iii. A clear explanation of any changes to the database schema that are needed (including additional tables, additional attributes, or additional constraints)
